

TXOne Release note- Firmware

Product type	Industrial EdgeIPS-LE	Release Date	2022/8/25
1. Release version ● Firmware name: ipsle.fw.t01_IPSLE_T01_1.1.5.acf ● Version: IPSLE_T01_1.1.5 ● Revision: eae314db ● SHA256 Checksum: 8a55524916a4c012caf35c52eed3d3944128139b92e093c1f1de3be3bb2750ae ● Signature info: TM_IPSLE_220816_19 ● CVER: 1.0.3 w/ 1.0.2 config			
2. Applied models ● Platform: ARM64 - IPSLE-102-BP-TM			
3. Release info ● TOS: ipsle_t01_1.1.5 ● Platform (mt7622): ipsle_t01_1.1.5 ● Import: ipsle_t01_1.1.5 ● TDTS: ics/2.6.26 A. Support Features ● Dashboard Widget • Added Bandwidth Utilization/Packet Transmission • Added Device MAC Address in Network Information ● Network Visibility Enhancement • Added “Reset the Asset(s)” function when login as an Administrator ● LLDP Feature ● Device/Master Object List ● File Filter Object ● New Feature of Protocol Filter Profile • Added Advanced Setting in SMB ● Protocol Profile Update by Signature • Advance to Schema Version 2007 ● Pattern Encyclopedia & MITRE ATT&CK ID ● Policy Enforcement Rule - Device/Master Rule List • Default IPS Profile (Editable/Removable, only shows up in factory default setting) • Status Setting can sync with ODC when EdgeIPS is registered to ODC • Search Bar in PE Rule Settings ● Policy Enforcement Rule - Basic & Advanced Filter ● Suspicious Object • Added Suspicious Object Feature • Added Log Information (Log > Suspicious Object Logs) • Added Suspicious Object Log in Syslog) ● Packet Capture by IPS Rule & PCAP Download • Added Viewer Access Permission to download PCAP file ● IPS Signature Release Info ● SNMP • SNMP (Get Info) (Administration > SNMP) • SNMP Modification (SysID) • SNMP (Attribute Update) ● Remote Access from ODC-VA to EdgeIPS LE			

- System Management Enhancement
 - Ping Management Interface
- Sync Setting Enhancement
 - Added the function to purge the imported Master Rule & Profile.
- CLI (Command-Line Interface) Support for EdgeIPS LE
 - Added MAC address information
- Add USB Applications Page
- Zero Configuration – New USB Dongle Support
 - innodisk / apacer
- Support QinQ

B. Improvement

C. Bug Fix

- [TXN-5868] - [TDTS][IPSLE] TDTS Memory Leak.
- [TXN-5807] - [SMB_advance] Sometimes SMB PF function is not workable after SMB connection created for a few time.
- [TXN-5727] - [Audit logs][DoS Setting] No audit logs when enable/disable DoS setting and switch mode.
- [TXN-5724] - [IPSLE][Dashboard] Port tx still counts even if this port doesn't link up.
- TXN-5697 [USB]EdgeDevie(IPSP, IPSLE) will save 0 byte config to USB when USB disk size is full.
- [TXN-5672] - [UI][File Filter]NO information about "Zip/gz file(s) larger than 100MB are ignored."
- [TXN-5618] - [IPSLE_about] IPSLE about page "3rd party license information" download file has incorrect message.
- [TXN-5606] - [IPSLE][Protocol Filter Profiles] Device and Master profile is inconsistent.

D. Known issue

- Buggy SoC/SDK.
- HW issues are covered by SW implementation.

E. SW limitation

- Policy enforcement cannot block ICMP rules which are based on reversed direction.
 - [TXN-1182] - Support ICMP policy enforcement rules which are based on reversed direction
- QinQ
 - Only support 802.1Q (0x8100) and 802.1ad (0x88A8)
- Active query of assets in inline mode
 - The subnets of MGMT and data MUST be the same
 - Fixed service ports are used: MODBUS (TCP: 502), CIP (TCP: 44818), FINS (TCP: 9600) and SMB (TCP: 445)

- The queried asset MUST be a server and can send back expected responses to EdgeIPS according to our query commands
- When modifying "Shared Secret Key" of TACACS+, no audit log is generated
 - [TXN-3020] - [TACACS+] TACACS+ only modified secret key does not have audit log.

F. Notes

- In current design, when service object is set to 'ICMP' and action is set to 'Deny', it won't work if 'Type/Code' are set as response categories or they are related to the other connection.

Comments :
