

TXOne Release Notes - Firmware

Product Type	EdgeOne	Release Date	2026/03/31
1. Release Version • Firmware Name: egone.fw_2.6.11 • Version: EdgeOne 2.6.11 • EdgeIPS 102/103 IPS Signature Version: TXv2_STD_250807_0 • EdgeIPS 102/103 CPSDR Signature Version: TX_CPSDR_ND_STD_250627_0 • EdgeFire IPS Signature Version: TXv2_STD_250807_0 • EdgeIPS Pro IPS Signature Version: TXv2_PRO_250807_0 • EdgeIPS Pro CPSDR Signature Version: TX_CPSDR_ND_PRO_250627_0 • EdgeIPS LE Signature Version: TXv2_LE_250610_0 • EdgeIPS Pro AV Pattern Version: av.ptn.t_1.000 • EdgeOne Signature Info: TXv2_SDP_220912_1			
2. Applied Models • Platform: ○ VMware ESXi 6 or later ○ VMware Workstation 14 or later ○ KVM 2.x or later ○ Hyper-V 10.x or later ○ Nutanix AHV 20220304.342/AOS 6.5.2 LTS or later			
3. Release Info • Supported Devices ☐ EdgeIPS v2.1.27 or later ☐ EdgeFire v2.0.13 or later ☐ EdgeIPS Pro v2.1.27 or later ☐ EdgeIPS LE v2.1.27 or later • New Features ☐ [Network Graph] ○ Added support for EdgeFire 2.2. ○ Support up to 100 custom groups. ○ Support drag-and-drop repositioning of nodes. ○ Added Edge group, Edge Hostname, and interface options to the filter. ☐ [Asset View] ○ Added a Legacy OS tag for assets running legacy operating systems. ☐ [System Dashboard] ○ Added a new dashboard widget for legacy assets. ☐ [Vulnerability Dashboard] ○ Added a confidence score widget. ☐ [Edge Deployment View] ○ Added a tree menu for hierarchical navigation.			

- Added filter search functionality.
- Added an Asset Layer view.
- [Vulnerability View]
 - Support scanning of embedded systems.
 - Added an asset-based view.
 - Added risk mitigation suggestions and detection capabilities.
 - Support CVE-based or asset-based CSV export.
 - Added confidence scores for OS names when the detailed version is unavailable.
- [OT Layer View]
 - Introduced as a dedicated standalone page.
- [Reports]
 - Support report generation across different Edge device types.
 - Added the following report widgets: Network Graph, Vulnerability Widgets, Vulnerability List, Vulnerable Assets, OT Layer View, and Edge Deployment View.
- [Email Notifications]
 - Support selecting a specific node group for email notification targeting.
- [Node Management]
 - Added EdgeFire support with the following capabilities:
 1. Legacy device option
 2. Protocol service port configuration
 3. PCAP advanced settings
 4. Enhanced matching criteria for TSAA and CODESYS protocols
 5. Expanded ARP scan range
 6. Global policy items review
 7. DoS option adjustment
 8. Auto rule learning with custom learning scope in Gateway mode
 9. Added Gateway and Bridge tabs to Global Policy
 10. Support device policy copying
- [Policy Enforcement]
 - Support rule matching priority across different types of policy rules
- [Policy Rule Auto-Learning]
 - Added a UI for previewing auto-learning results before applying.
- Update Menu Category
 - Updated menu categories for improved navigation.

- **Enhancements**

- ❑ [Network Graph]
 - Enhanced node grouping based on RFC standards.
 - Support pop-out communication details on Layer 4.
 - Support reopening the asset information tab on Layer 4.
 - Enhanced asset display options.
- ❑ [Asset View]
 - Support redirecting the Onboarding Interface to the [Edge Deployment View].
 - Display all onboarding interfaces and edge devices on the [Asset View].
 - Display asset lists filtered by node group and Edge device type in the tree menu.
 - Vulnerability details now support direct redirection to the [Vulnerability View] with the corresponding CVE filter applied.
- ❑ Account management
 - Added login and logout timestamps to account activity records.
- ❑ [Logout timer]
 - Added additional timeout duration options.
 - Updated the default session timeout to 60 minutes.

• Bugs Fixed

- ❑ [TXN-16398] Fixed an issue where EdgeOne might fail to run a component update due to a checkSecretKey error.
- ❑ [TXN-16463] Fixed an issue where the license check might take an extended amount of time to complete in an air-gapped environment.
- ❑ [TXN-16804] Fixed an issue where EdgeOne might fail to restore the configuration when the certificate is expired.
- ❑ [TXN-16755] Fixed an issue where EdgeOne might not allow users to log in to Vshell on KVM or Nutanix platforms.

• Known Issues

- ❑ If the configuration file restored on EdgeOne does not include any 1.x Edge devices, existing 1.x Edge devices may not be able to sync to EdgeOne.
- ❑ If an Edge device is moved to the [Ungrouped] section, its port security settings are changed through the device web console, and the device is then moved to a group within two minutes, the port security settings will be replaced by EdgeOne default settings.
- ❑ If a v2.4.18 EdgeOne previously upgraded from an earlier version is upgraded to v2.5, the system must be rebooted; otherwise, the upgrade will be rejected.
- ❑ If the user logs in to the EdgeFire using SSO through the WAN port, the device

cannot be remotely accessed from EdgeOne.

- ☐ When EdgeOne system notifications are generated but the associated logs are purged before the user reads the notifications, the user will not be able to find them on the log pages.
- ☐ If the query time range is large but the data is small, the query time would be excessively long.
- ☐ The application name is absent in the [App Usage] pane on the [Asset View] page when the pattern version is different between EdgeOne and Edge devices.

4. Notes

- For VMware:
 - ☐ Image File: edgeone_2.6.11.ova
 - ☐ SHA256 Checksum:
a94f3c95f3040b4e21515e8f9e9aede3b6018e40638c53f3b2641884479af0e2
